

THE UN2023 Gamechanger Challenge

Do you want to contribute to achieving the Sustainable Development Goals (SDGs) but you have no idea how? Keep reading!

Wavemakers United and IHE Delft Institute for Water Education have developed a Challenge that encourage young people to come up with an innovative and implementable idea that contributes to the global water challenges. This way you can contribute to a climate resilient future.

The Challenge goes: "Develop an innovative and implementable idea that takes on global water challenges and ensures a climate resilient future."

The best 5 ideas will be pitched in New York during the UN2023 Water Conference in March 2023!

How can you participate?

Participants must be at least 17 years old and affiliated with a knowledge institute. Want to join as local community/primary school? – read on to the next page.

How does it work as a participant? This video explains everything!

https://youtu.be/P1_gw4O-L84

In short:

1. Put together a team of 2-6 people
2. Find a primary school, secondary school, music school or sports club within your local community and enter into a partnership.
3. Sign up!
4. Give a guest lesson to your chosen community! (This lesson is ready)
Inspire the children to come up with solutions and take these ideas with them.
5. Develop your idea!
6. But chance to go to New York!

The challenge is unique because it gives multiple levels of education a chance to learn about the SDGs and think about solutions. In addition, the challenge also focuses on underprivileged children who can not go to school or have no acces. The goal of the UN 'leave no one behind' is what we as an organization take very seriously!

How can I participate as a primary or secondary school or other local community?

Participating students will deliver the idea in a team of 2-6 people, inspired by the guest lesson given to a local community. This can be a primary/secondary/music school or even a sports club/foundation. So yes, you!

The student gives a guest lecture about the SDGs and the next generation learns about water and sustainability. In addition, the students are challenged to come up with a solution regarding the global water challenges. Children think less in terms of limitations and therefore the outcome might be a great out of the box idea! The student will take the idea to further develop. A real win-win!

1. Find a student who is enrolled in a university or knowledge institute.
2. Make an appointment with the student for a guest lesson.
3. Enjoy the guest lecture and challenge the children to innovate!
4. The student keeps the school informed of the progress
5. Will your idea be in the top 5? Big chance that your idea will actually be implemented by external companies!

Please let us know if we can help finding a match for you. Don't hesitate and contact us through community@wavemakersunited.com
